

Lucerne

SPECIAL-TOUR «BUNKER TOUR»

Travel through time with unterirdisch überleben and mobileo and experience the era of the Cold War using the electric vehicle of modern age, the innovative Segway PT.

We begin our short ride through bubbly Lucerne after an extensive driving and safety training at the Premium Business Centers. Located directly in the heart of the city of Lucerne, we arrive at the hidden entrance of the civil protection installation Sonnenberg and enter on our Segway PT. We are instantly transported to a time that was characterized by fear of a nuclear attack and taking respective precautionary measures.

The bunker was built in the 1970s during the Cold War and would have offered protection for 20'000 citizens of Lucerne. The mass of people would have come in through today's tunnel entrances of the Autobahn A2. There are bunk beds and sanitary facilities, a hospital, recreation rooms and even an information centre in the underground space.

We offer you the unique possibility to immerse yourself into this era and to drive through the giant seven-storey underground building, guided by professional Segway and Bunker guides. You will gain insight into the former public protection installation and learn interesting facts about its origins as well as its present use.

After completing the underground guided tour we will return to the Premium Business Center where this unforgettable Segway tour ends.
